DMS One

Digital Measuring System

The DMS One is a bold leap into the future, allowing you and your team to produce high-quality digital templates with ease and efficiency from every job site. With the DMS One, production facilities can reduce the need for wooden templates and speed up the templating process by capturing measurements digitally and remotely transmitting the digital design file (DXF) to production.

Removing the need for template technicians to return to the shop will keep them moving from measure or installs faster to increase productivity. The DMS One will reduce or eliminate the likelihood of human error in the measuring and templating processes and ensure that jobs are delivered to production with the most accurate specs each time.

Also, show customers that their job matters by giving them the impression of quality and precision in all stages of the project with the DMS One.
